HolyCross - Hospital Appointment Management

Duration: 30 Hours
Technologies Used: Django, Python, SQLite, HTML, CSS, JavaScript
Description: Developed a comprehensive Django-based web application for a hospital management system. The platform enables patients to schedule appointments with doctors seamlessly, manage medical records, and receive notifications for upcoming appointments. Additionally, it includes features for doctors to update patient records, manage schedules, and communicate with patients, resulting in improved healthcare service efficiency and patient satisfaction.

Movie Website

Duration: 28 Hours
Technologies Used: Django, Python, SQLite, HTML, CSS, JavaScript
Description: Created a robust website specializing in the sale of movies. The platform provides customers with an intuitive interface to browse, purchase, and stream their favourite films online. Implemented secure payment gateways, user authentication, and personalized recommendations. The project also included a review and rating system to enhance user engagement and satisfaction.

Super-Mart - E-Commerce Website

Duration: 26 Hours
Technologies Used: Django, Python, SQLite, HTML, CSS, JavaScript
Description: Developed a feature-rich e-commerce website focusing on the sale of fresh vegetables and fruits. The platform offers customers a convenient interface to browse products, place orders, and track deliveries. Implemented features include a user-friendly shopping cart, secure payment processing, and order management. Additionally, integrated an inventory management system for store administrators to efficiently manage stock levels and update product information in real-time.
